

First-Time Homebuyers Want Stylish Design While Remaining “Comfortably Affordable”

MODEL R94LSi TANKLESS WATER HEATER

First-time homebuyers have an escalating interest in design. While having the desire to own a home that realistically fits into a budget, they also want the home to reflect their true sense of style. These home buyers do not want to sacrifice technological advances. Instead, they want to use home accessories that are above the standard builder grade options.

The home classified as “Comfortably Affordable” in the Show Village for 2008 is a two-story, single family structure that measures approximately 1,984 square feet. Though it is just 15.5 feet wide, the home offers porches on both levels and consists of 3 bedrooms, 2½ baths. The home has a well-balanced design using an exceptionally open floor plan, and the design fits perfectly on a narrow lot or infill purpose. It was built with the first-time buyer’s financial outlook in mind using green technology and products.

Why Rinnai?

This Show Village home is energy efficient and has a variety of renewable energy features. In complying with the Builders Challenge Standards, this home rates at 69 on the EnergySmart Home Scale (E-Scale). This home gained the recognition of Certified Florida Green Home by the Florida Green Building Coalition. In combining energy efficiency, comfort and style, the Rinnai unit fit the mold perfectly. The use of a Rinnai tankless unit in conjunction with other renewable energy features will increase salability for builders in today’s market and assist in keeping the carbon footprint from this home to a minimum.

Installed in this home was a Rinnai R94LSi unit. The Rinnai can be set to operate at exact temperatures specified by the homeowner using a digital controller. This temperature control feature is appreciated in households with small children or elderly individuals to aid in preventing scalding accidents. The Rinnai Tankless Water Heaters supply consistently hot water when

there is a demand, for as long as needed. This saves the homeowner on monthly energy costs and allows them to run multiple plumbing fixtures simultaneously without a reduction in water temperature or running out of hot water all together.

MODEL R94LSi TANKLESS WATER HEATER

THE RINNAI ADVANTAGE

- Continuous hot water delivered up to 9.4 GPM
- Commercial-grade heat exchanger for residential and commercial applications
- Sleek, sculpted water heater design
- EZConnect™ (connects two units together)
- Digital control for consistent temperature
- Energy efficient up to .82 EF
- Wall-mount compact design for increased space-savings
- Flexible options for interior or exterior installation

Rinnai's innovative tankless technology offers an endless supply of hot water through multiple outlets simultaneously. No matter what your hot water requirements are, the Rinnai can be configured to handle the job. Call or E-mail us with your application.
